?Did you have a density on this sample?

Thanks

HI Charlie,

Please see results below from the new treatability study for Nathalie. You will see that a 2% dosage rate by weight reduced the lead to non-detect (<0.067 mg/L). The lead was not very high, so if you expect that you might have hotter areas in this lot, you may want to use 3% dosage to be conservative.

Nonresponsive based on revised scope

Hi. Attached is a copy of your treatment form. Please note we are TCLP for Pb & Cd. I checked the wrong column on the form.

Thanks and have a great evening.
